Federal U.S. IEPA Program Aimed at Runoff, or “Nonpoint Source,” Pollution Program Advances Funds California Watershed Restoration Efforts in California CA funds watershed restoration projects with Federal Nonpoint Source Program Grant funds

*California Water Boards leverage EPA support award project to protect water
quality in Tomales Bay, Marin County, used for recreation and oyster production*

SAN FRANCISCO – California Water Boards will use \$4.4 million of an U.S. Environmental Protection Agency (EPA) grant to fund projects in seven counties around the state. EPA’s annual Clean Water Act (CWA) 319 Nonpoint Source Program grant assists the Water Boards to in implementing programs to address pollution caused by runoff moving over the ground, known as nonpoint source (NPS) pollution.

The Marin Resource Conservation District was awarded over \$700,000 by California Water Boards for their *Conserving Our Watersheds* (COW) Program. This project to help ranchers within the Point Reyes National Seashore to implement management practices to prevent nitrogen, phosphorus, sediment and bacteria from livestock operations from getting running off into Tomales Bay. Tomales Bay in Marin County supports oyster production and recreational activities including kayaking and fishing.

Since 2009, CA’s NPS Program has awarded \$2.75 million for the *Conserving Our Watersheds* (COW) Program to help ranchers in the Tomales Bay watershed install conservation practices on agricultural lands. The Marin Resource Conservation District supports the everyday work of ranching and farming in Marin County, by providing private landowners and agricultural producers with project planning and permitting assistance, technical and engineering expertise, construction contractors, and maintenance and monitoring assistance.

“EPA is proud to promote the COW Program, which promotes and supports water quality improvements within Marin County’s watershed. boundaries will reduce reducing runoff of sediment, nutrients, and bacteria from livestock operations ranching into Tomales Bay,” said EPA Pacific Southwest Acting Regional Administrator Deborah Jordan.

Commented [TT1]: I tried to trim down a bit as the piece is good but a bit long for a press release and we don’t want to lose the readers before the subsequent information.

Commented [AM2]: Attribute quote to Tomas

“Federal investment in nonpoint source solutions means the Water Board can support the Tomales Bay project and similar projects that are making water safer for our communities,” said Joaquin Esquivel, Chair, California State Water Resources Control Board. “When federal, state, and local leadership are aligned, opportunities to protect California’s most vulnerable watersheds expand exponentially.”

Six other NPS projects were also being supported awarded from this EPA FY20 funding. Two projects address post-wildfire conditions:

- the Sonoma County Resource Conservation District was awarded \$342,000 for *Post-Fire Recovery and Sediment Reduction in Mark West Creek* in Sonoma County, and
- the Earth Island Institute and South Coast Habitat Restoration were awarded \$799,000 for *Carpinteria Creek Sediment Reduction and Habitat Enhancement Project* in Santa Barbara County.

Four additional projects address riparian habitat restoration:

- California Trout, Inc was awarded \$674,000 for *Hart Ranch Stock Watering and Riparian Fence Project* to support riparian restoration in the Little Shasta River in Siskiyou County,
- the Eel River Recovery Project was awarded \$474,000 for *Tenmile Creek Streambank Erosion Prevention and Riparian Restoration Project* in Mendocino County,
- the Truckee River Watershed Council was awarded \$590,000 for Phase 1 of the Euer Valley Restoration Project in Nevada County, and
- the Napa County Department of Public Works was awarded \$800,000 for Phase 2 of the Napa River Restoration: Oakville to Oak Knoll, Group D, in Napa County.

~~"Federal investment in nonpoint source solutions means the Water Board can support the Tomales Bay project and similar projects that are making water safer for our communities," said Joaquin Esquivel, Chair, California State Water Resources Control Board. "When federal, state, and local leadership are aligned, opportunities to protect California's most vulnerable watersheds expand exponentially."~~

Since 2004, the Water Board's Nonpoint Source Program has awarded over \$65 million of EPA grant funds for local projects that reduce nonpoint source runoff pollution into California's waters of the State of California. The projects make waters safer for people and wildlife by preventing sediment erosion from rural roads and wildfire-impacted areas, controlling pollution from grazing and livestock operations, supporting farmers to plant cover crops on farms and vineyards to improve soil health, and restoring stream habitat affected by legacy timber activities.

Commented [AM3]: In previous references, Water Boards was plural. Shouldn't we keep it plural here?

In December, EPA approved California's 2020-2025 Nonpoint Source Program Implementation Plan, which made the state ~~States~~ with EPA approved programs to manage nonpoint source water pollution can apply eligible for EPA grant funds to support their programs. In 2021, California Water Boards are eligible to apply for \$9 million in federal funds of CWA section 319 funds, which will support \$4.5 m in projects as well as Water Board staff to implement programs to address priority nonpoint sources of pollution, conducting inspections, and working with stakeholders to find effective solutions for water quality problems.
